

How to upgrade/ update npm vesion

This is the new best way to upgrade npm on Windows.
Follow below steps

Go to Window

Type Run **PowerShell** and open as Administrator

First: Run command ->

`Set-ExecutionPolicy Unrestricted -Scope CurrentUser -Force`

Secondly:

`npm install -g npm-windows-upgrade`

and then

`npm-windows-upgrade`

Note: Do not run `npm i -g npm`. Instead use `npm-windows-upgrade` to update npm going forward. Also if you run the NodeJS installer, it will replace the node version.

- Upgrades npm in-place, where node installed it.

Easy updating, update to the latest by running `npm-windows-upgrade -p -v latest`.

- Does not modify the default path.
- Does not change the default global package location.
- Allows easy upgrades and downgrades.

[Officially recommended by the NPM team.](#)]

- A list of versions matched between NPM and NODE (<https://nodejs.org/en/download/releases/>) - but you will need to download NODE INSTALLER and run that to update node (<https://nodejs.org/en/>)]
