

How to Moving Wordpress Plugin Folder

If you don't want to change the location of the entire wp-content folder but just want to move the plugins folder then you can change this location the same as above.

For the plugin folder location we need to define the variable **WP_PLUGIN_DIR**.

```
[php]
define( 'WP_PLUGIN_DIR', $_SERVER['DOCUMENT_ROOT'] . '/blog/content/wp-content/plugins' );
[/php]
```

The same as the wp-content folder you can change the URL of the plugin folder for the variable **WP_PLUGIN_URL**.

```
[php]
define( 'WP_PLUGIN_URL', 'http://example/blog/content/wp-content/plugins' );
[/php]
```

The problem with doing this for plugins is that there is another variable which can be used by some plugin developers... **PLUGINDIR**. Therefore you need to make sure that you change this too.

```
[php]
define( 'PLUGINDIR', $_SERVER['DOCUMENT_ROOT'] . '/blog/content/wp-content/plugins' );
[/php]
```
